

Claims

1. An electrical connector assembly comprising:
 - a first connector having a first insulating housing with first contacts, and a first shielding shell that is externally mounted on first insulating housing,
 - 5 a second connector mated to the first connector, the second connector having a second insulating housing with second contacts, and a second shielding shell that is mounted on the second insulating housing,
 - 10 the first connector has a latching arm with a first engaging part, the first engaging part has electrical continuity with the first shielding shell,
 - 15 the second connector has a second engaging part which has electrical continuity with the second shielding shell, the second engaging part engages with the first engaging part of the latching arm to provide a locking and electrical engagement therebetween, and
 - 20 the first and second shielding shells respectively have a plurality of first and second contact parts which are disposed in the direction perpendicular to the mating direction of the first and second connectors, the first and second contact parts contact each other when the first and second connectors are mated with the first engaging part of the first connector and the second engaging part of the second connector form a portion of the first and second contact parts, whereby the plurality of the first and second contact parts as a whole are disposed at equal intervals in the direction perpendicular to the direction of mating of
 - 25 the first and second connectors.
- 30

2. The electrical connector assembly as recited in Claim 1, wherein the contact parts of the second connector are spring contacts that protrude from the second shielding

shell of the second connector toward the first shielding shell of the first connector.

3. The electrical connector assembly as recited in
Claim 2, wherein the first contact parts of the first
5 connector are contact surfaces of the first shielding shell
that contact the spring contacts of the second connector.

4. The electrical connector assembly as recited in
Claim 1, wherein the latching arm is made of metal, the
10 first engaging part of the latching arm is an engaging hole
that is formed in the latching arm.

5. The electrical connector assembly as recited in
Claim 4, wherein the second engaging part of the female
15 connector is an anchoring projection which is caused to
protrude from the second shielding shell, the anchoring
projection engages the engaging hole.

6. An electrical connector comprising:
20 an insulating housing that holds contacts, a
shielding shell that is externally mounted on the insulating
housing, and a locking part that is disposed on the outside
of the shielding shell for engagement with a mating
connector,

25 the locking part has a metal latching arm whose front
end is fastened to an end portion of the shielding shell,
and whose rear end is held so that the rear end can slide on
a surface of the shielding shell, the latching arm has an
engaging part which is located near the front end part of
30 the latching arm, the engaging part cooperates with a mating
engaging part of the mating connector, the latching arm has
a pressing part which is located on the rear part of the
latching arm.

7. An electrical connector assembly as recited in Claim 6, wherein the latching arm of the locking part has a shallow inverted shape.

5 8. The electrical connector as recited in Claim 7, wherein the engaging part of the latching arm which has an engaging hole that is formed in the forward-facing surface of the latching arm.

10 9. The electrical connector as recited in Claim 8, wherein the pressing part is the rearward-facing surface of the latching arm, the pressing part is inclined toward the rear of the latching arm.

015 10. The electrical connector as recited in Claim 9, wherein a covering enclosure is formed on the outside of the shielding shell with the end portion of the shielding shell exposed, the covering enclosure has a finger-catch part on the rearward-facing surface that makes it possible to push the rearward-facing surface.
